

HEXAGON

Hexagon | NovAtel® Announces Version 8.90 for Waypoint® Post-Processing Products

January 28, 2020

NovAtel is pleased to announce the latest update, version 8.90, to our Waypoint post-processing portfolio, which consists of Inertial Explorer®, GrafNav/GrafNet® and Inertial Explorer® Xpress. All Waypoint customers with an active subscription that are within their support period qualify for this upgrade at no additional charge.

Version 8.90 of Waypoint software provides the following key upgrades:

- Precise Point Positioning Ambiguity Resolution (PPP-AR) in combination with TerraStar® Near-Real-Time (NRT) provides up to a 45% increase in horizontal position accuracy using shorter data sets, allowing users to perform small surveys and spend less time in the field
- Auto Compute RBV simplifies existing workflow by solving for the rotations and applying velocity constraints during the same processing run

To request an update on an active subscription or inquire about your license status, please [click here](#).

All customers upgrading to Waypoint 8.90 within the first 90 days will automatically receive a free 30-day demo license for TerraStar-NRT.
