DUAL-FREQUENCY SMART ANTENNA FEATURING POWERFUL OEM6® TECHNOLOGY

SCALABLE PERFORMANCE
From single-frequency GLIDE™ autonomous tracking to dual-frequency Real Time Kinematic (RTK), the SMART6 positions you for success. The SMART6 integrates NovAtel’s OEM6 receiver and Pinwheel® antenna technologies in a single, rugged housing. Software upgradable, the SMART6 eliminates the need for costly hardware replacement as requirements change, while delivering scalable accuracy and performance.

MULTI-CONSTELLATION FOR ENHANCED POSITIONING
Capable of tracking L1/L2 GPS+GLONASS, the SMART6 improves position availability in obstructed sky conditions. Dual-frequency tracking minimizes the impact of ionospheric disturbances, further enhancing field productivity.

SMOOTH PASS-TO-PASS ACCURACY USING GLIDE
SMART6 features NovAtel’s GLIDE technology, providing ultra-smooth positioning and exceptional pass-to-pass accuracy. GLIDE’s steady, smooth output is especially well suited for manual guidance and autosteer applications and will bridge through short periods of poor satellite availability. Dual-frequency GLIDE further improves the absolute accuracy of the GLIDE position and creates a robust solution, resistant to the effects of high ionospheric activity.

TILT COMPENSATION FOR INCREASED ACCURACY
With optional integrated tilt compensation, the SMART6 improves guidance and autosteer performance on uneven terrain.

INTEGRATED BLUETOOTH® CONNECTIVITY
SMART6 is available with optional Bluetooth technology to provide wireless connectivity.

MULTIPLE INTERFACES FOR MAXIMUM FLEXIBILITY
NMEA 0183 compatible RS-232 serial ports, a NMEA2000 compatible CAN port and Bluetooth wireless technology provide maximum flexibility. The SMART6 also provides simulated radar ground speed output, 1 PPS output, an event mark input and three daylight readable status LEDs. Built-in magnets simplify mounting. Fixed mounting options are also available.
